

# Proposed Miami Bridge Improvements

## Alternative Transportation Solutions

### Amphibious Vehicle

<u>Service</u>	<u>Cost</u>	<u>Key Considerations</u>
3)Amphibious Vehicle	\$0.25 Million	<b>Swift Current</b>

- ◆ The amphibious vehicle service would employ a vehicle similar to those used for sightseeing tours in Branson, MO, and other locations to transport passengers from one side of the river to the other.
- ◆ However, further investigation determined that an amphibious vehicle would have difficulty negotiating the Missouri River in this location, primarily due to the speed of the river current.
- ◆ River debris is another issue of concern for this type of vehicle.
- ◆ This option would require commuters to have a vehicle on both sides of the river.
- ◆ Not only would this option not provide the community’s desired level of reliability, there are some significant safety concerns associated with this option.
- ◆ The cost to implement this option is estimated as approximately \$250,000.
